

### **Credit card security/shopping online safely**

Be security conscious when you shop online. There are three common ways fraudsters can get your details: phishing emails, data breaches and malware. Protect your details by refusing to share them with anyone who seems suspicious. Avoid using public Wi-Fi when you can and keep software and virus protection up to date. Stop the cybercriminals by using passwords with a good combination of upper- and lower-case letters, numbers and symbols. Finally, keep an eye on your bank statements and query anything that looks unusual.
